

LIVE NOW

Excelakuten

Automated repair for broken Excel files.

You don't need to know what's wrong — it finds out for you.

- 7-stage pipeline: load → diagnose → structure → clean → formula repair → validate → export
- You get a NEW file back — your original is never touched
- Fixes what it can — honestly reports what it can't

Python · FastAPI · openpyxl · LibreOffice · Azure Container Apps

THE PROBLEM

Excel files nobody dares to touch

- #REF! errors and formulas pointing at deleted sheets and dead network drives
- Circular references that make Excel refuse to calculate
- Hidden sheets and columns that visible formulas silently pull numbers from
- Hardcoded values pasted straight over live formulas
- Text dates, numbers stored as text, stray whitespace — looks like data, isn't
- Corrupt XML: the file won't even open

My test file: 106k+ formulas, 28k volatile, three sheets Excel itself wants to "repair".

Seven stages — each one logged

1

Load

parses even corrupt files — CSV, .xls, .ods

2

Diagnose

error map: hidden sheets, external links, broken chains

3

Structure

finds tables, data types, data sources

4

Clean

text dates → dates, "1 234.56" → numbers, dupes out

5

Repair

#REF!, circular refs, pattern-based fill

6

Validate

LibreOffice recalcs everything — new errors = stop

7

Export

clean .xlsx + Report, Review and Changelog tabs

THE DEMO

Drag in a file — watch the stages live

Reparera filen

3 s

Ren med varningar

Export_avstamning_KORRUPT.xlsx · 44 kB → 47 kB · klart på 3,0 s

Every stage reports in real time via the job API — no magic spinner.

Files are processed in memory and never stored.

THE RESULT

98 seconds — everything accounted for

1	ÄNDRINGSLOGG	Excel Repair Pipeline				
2	Ändringar av typen 'gissning'/'okänd' listas per cell nedan — de bör kontrolleras av en människa. Mekaniska ändringar ('säkra', t.ex. text→tal) summeras per blad längst ner.					
3						
4	ÄNDRINGAR ATT GRANSKA					
5	Blad	Cell	Före	Efter	Åtgärd	Typ
6	Inga ändringar kräver manuell granskning.					
7						
8	SAMMANFATTNING — säkra ändringar					
9	Blad	Antal	Åtgärd	Exempelceller		
10	Kvitton	19	cell rensad	A835, B835, C835, D835, E835		
11	Kvitton	300	text konverterad till datum	B3, B7, B16, B18, B23		
12	Kvitton	19	överflödiga mellanslag borttagna	D30, D113, D125, D130, D208		
13	Mail från Anna	1	överflödiga mellanslag borttagna	A9		
14						
15						

10,708

text values → numbers

2,447

text dates → real dates

4,105

circular references broken

40,134

formulas syntax-fixed

102,132

formulas recalculated — 0 new errors

56,651 safe changes summarised per sheet —
uncertain ones listed per cell.

DEEPER THAN SYNTAX

Correct, not just valid

A formula can be syntactically perfect — and still return the wrong number.

1 240
860
5 112
...
430

1 500

=SUM(B2:B41)

=SUM(B2:B41) looks like it covers everything —

but row 42 was appended later.

GRANSKA DESSA — Excel Repair Pipeline				
Problem som hittats men inte ändrats — siffrorna här kan vara missvisande. Kolumnen Antal visar hur många liknande ställen som hittades.				
Typ	Blad	Plats	Detalj	Antal
Summering missar data utanför området	Kvitton	E903	område E2:E886, data i: E887	1
Summering missar data utanför området	Kvitton	E904	område E2:E100, data i: E101	1
Text kvar i typad kolumn	Kvitton	kolumn Belopp	59 celler ser ut som tal/datum men är text	59

- Sums and COUNTAs whose range probably misses data appended outside it
- Formulas silently pulling numbers from hidden sheets
- Cells where formulas were overwritten with values
- External links to files that don't come along

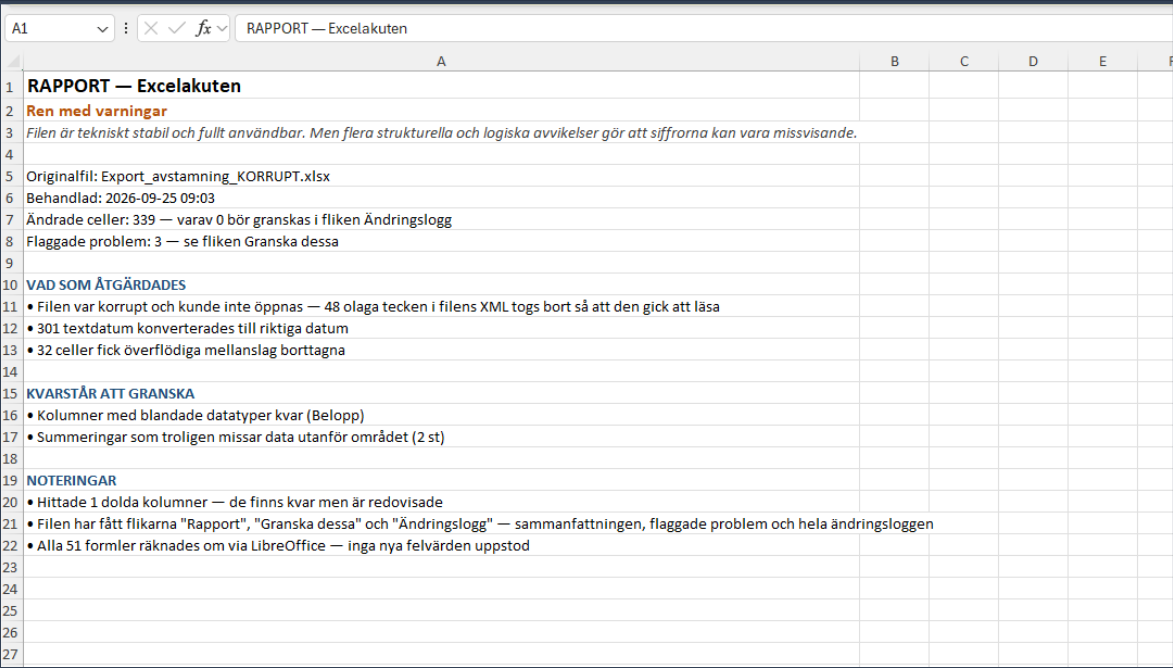

SAFETY RULES

What it refuses to touch

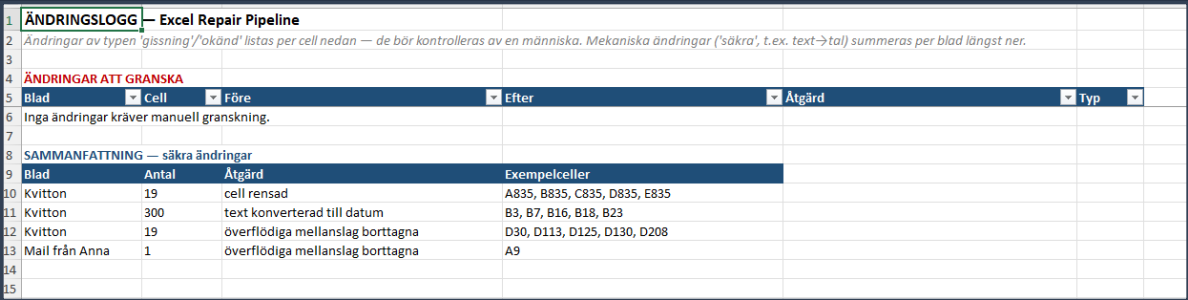

- ID columns like "00123" stay text — no silent conversion
- Rows and columns are never deleted if it would shift formulas — the cell is cleared and logged instead
- Table headers and table ranges are left untouched
- Hidden and protected sheets are never modified — they get flagged
- Reconstructed formulas always state the pattern they were built from

WHY I BUILT IT

It tells you what it CAN'T fix

The Rapport tab: the verdict, first in the file

The changelog: every cell, before/after

- Nothing is deleted silently — cleared cells are logged by reference
- An integrity check diffs every cell against the original — unexplained changes get flagged

Built as Tier-1 of a larger vision:

understand the file's data sources —
then automate the whole pipeline behind it.
